

Murine RNase Inhibitor (Glycerol Free)

Catalog # RNI01-G511B

Lot # 1L1969-1

Product Description

Murine RNase inhibitor is a recombinant protein of mouse origin expressed in *E. coli* cells. This protein is in a glycerol free storage buffer which is lyophilizable and has excellent thermal stability and storage stability.

Storage and Stability

Store at -30°C to -15°C. To avoid repeated handling and multiple freeze/thaw cycles aliquot product into smaller quantities.

Scientific Background

RNase inhibitor is a large (~50kDa) protein that forms extremely tight complexes with certain ribonucleases and may play an important role in regulating the lifetime of RNA *in vivo* (1). It has an unusually high cystine content and is thus sensitive to oxidation (2). Murine RNase inhibitor is a mouse sourced recombinant protein expressed in *E. coli*. Mouse sourced RNase inhibitor contains two fewer Cys residues than human RNase inhibitor and is thus less oxidation sensitive. It can inhibit the activity of RNase A, B or C in a non-competitive way to protect RNA from degradation. Murine RNase Inhibitor (glycerol free) has excellent thermal stability and storage stability. Due to its reduced oxidation sensitivity, it is highly suitable for experiments (e.g. qPCR assays) that are sensitive to reducing agents.

Activity

The activity of Murine RNase Inhibitor was determined to be 40 U/μl, using the unit definition below:

Unit Definition:

One activity unit (U) is defined as the amount of enzyme needed for inhibiting 50% activity of 5 ng RNase A. The activity of RNase A is detected by quantifying the hydrolysis of Cyclic 2', 3'-CMP to 3'-CMP.

This product is manufactured in an ISO 9001 and ISO 13485 certified facility.
