## **RNase H II (Glycerol Free)**

**Catalog # RNH02-E311B**

Lot # 1S2487-1

### **Product Description**

RNase H II (Glycerol Free) is an endoribonuclease enzyme in a glycerol free storage buffer that catalyzes the cleavage of RNA in an RNA/DNA substrate via a hydrolytic mechanism. RNase H II is optimized for reactions at 70°C.

### **Storage and Stability**

Store at -20°C and mix thoroughly before use. To avoid repeated handling and multiple freeze/thaw cycles aliquot product into smaller quantities.

**RNase H is sensitive to physical denaturation, and vigorous shaking can easily affect its activity. It is recommended to gently invert the test tube to mix before use.**

### **Scientific Background**

Ribonuclease H II (RNase H II) is an endoribonuclease that specifically hydrolyzes the phosphodiester bonds of RNA on RNA/DNA hybrid strands but does not hydrolyze phosphodiester bonds in single/double stranded DNA or RNA. The enzyme works by breaking the phosphodiester linking RNA bases in 5' direction to DNA bases, generating a 3' hydroxyl end and a phosphate group at the 5' end of the ribonucleic acid. RNase H II (Glycerol Free) is in a glycerol free storage buffer and is specially optimized and formulated according to requirements of freeze-dried reagents. It can be used in PCR amplification systems, qPCR, LAMP and other reaction systems that rely on endoribonuclease H.

### **Activity**

The activity of RNase H II (Glycerol Free) was determined to be 200mU/µl.

#### **Unit Definition:**

One activity unit (U) is defined as the amount of enzyme required for cleavage of 1 nmol of a synthetic duplex containing a single rC per minute at 70°C in 10 mM NaCl, 0.01% Triton X-100, 10 µg/ml BSA, and 4 mM MgCl<sub>2</sub>.

### **Quality Control**

**Functional Testing:** Tested for sensitivity, stability, and repeatability in a LAMP reaction system.

**Nuclease Activity:** No exogenous ribonuclease or endonuclease activity.

**Contamination:** No exodeoxyribonuclease contamination.

### **Instructions For Use**

The dosage of RNase H II may be different in different reaction systems and needs to be adjusted according to the experiment. The recommended adjustment range for a 50 µL reaction system is 4-400 mU.
