## Cas13 ssRNA Reporter

Catalog # CS13-57

Lot # 1Y2349-3

### Product Description

Cas13 ssRNA reporter is a single-strand oligo RNA probe with a 6-FAM (Fluorescence) label at the 5' end and a BHQ (quencher) label at the 3' end. When combined with guide RNA and target RNA, Cas13, enzymes exhibit activated trans-cleavage activity against ssRNA. Upon cleavage, the quenched fluorescence of the probe recovers, enabling enzyme activity analysis and target detection.

### Appearance

White to off-white lyophilized powder in dark tube.

### Reconstitution Protocol

Rehydrate in 100  $\mu$ L nuclease-free water to make a stock solution with a concentration of 100  $\mu$ M. Prior to use, dilute the stock solution with nuclease-free water to a working concentration of 10  $\mu$ M, and add it to the CRISPR cleavage reaction system according to the required concentrations.

### Storage and Stability

Store at room temperature (15-30°C), in a dry, light-protected environment; transport at room temperature. After reconstitution, store the stock solution (100  $\mu$ M) at -80°C in the dark for 6 to 12 months without repeated freeze-thaw cycles. The working solution (10  $\mu$ M) can be stored at -20°C in the dark and used within 3 to 6 months.

**Always include RNase inhibitor at manufacturer recommended concentrations in Cas enzyme reactions.**

# Cas13 RNA Trans-Cleavage Activity Assay Protocol

## Reaction Components

Component	Final Concentration
10X Cas13 Reaction Buffer (CS13-09 or CS13-09B)	1 X
Cas13 Enzyme	25 ~ 250nM
Guide RNA	25 ~ 250nM
Target DNA	25 ~ 250nM
Cas13 ssDNA Reporter (CS13-57)	25 ~ 500nM
Nuclease-free water	up to 20ul

## Assay Protocol

The RNA trans-cleavage activity of Cas13 is detected in a CRISPR-based fluorescent reporter assay. RNA-guided RNA binding to Cas13 activates the enzyme, induces target RNA cutting as well as collateral RNase activity. The latter leads to the degradation of the reporter substrate which emits a light signal on cleavage.

**Step 1.** Thaw the Cas13 enzyme on ice. Equilibrate the buffer, guide RNA, target DNA, and reporter substrate to ambient temperature.

**Step 2.** Combine the following components and incubate at room temperature for 10 minutes:

- 10X Cas13 Reaction Buffer
- Cas13 Enzyme
- guide RNA
- Nuclease-free water

*Note: A blank control can be set up by replacing the enzyme with an equal volume of nuclease-free water.*

**Step 3.** Add the target RNA and the reporter.

**Step 4.** Incubate at 37°C for 15-30 minutes

**Step 5.** Read the fluorescence.

Note: Each reaction component amount may need to be adjusted according to different experimental purposes. Optimal conditions may vary due to differences in guide RNA, target RNA, and reporter used.
